

MY DISCOVERY OF EQUIVALENCE OF MORAL VALUES OF MUSLIMS AND CHRISTIANS IS BIGGER THAN MICROSOFT WORD AND EXCEL

ZULFIKAR MOINUDDIN AHMED

On July 15 2021, I found an equivalence of moral values between Christians and Muslims for a selected set of values. I will argue here that my great discovery of this equivalence is *far greater* than Microsoft Word and Microsoft Excel.

At first sight, this seems a bit nontrivial to compare, for my result of equivalence of moral values between Christians and Muslims is not a *successful commercial product* and so there is a question of what criteria can we use to compare the two achievements.

There are various ways to gauge how big one is versus the other.

1. MY CHRISTIAN-MUSLIM MORAL VALUES EQUIVALENCE IS 4.7 TIMES BIGGER BY POPULATION

One is simply by the number of people who are affected. Here my equivalence of moral values of Christians and Muslims will win without question. There are roughly 3.5 billion Christians and Muslims on Earth.

On the other hand, Microsoft Excel is used by 750 million people around the world. So by the number of people affected my result is 4.7 times bigger than Excel. And it has a similar bigness compared to Microsoft Word.

2. COST OF REDUCTION OF STRIFE

My result of Muslim-Christian moral equivalence can be also compared with sales revenue of Microsoft Word and Excel. Dissemination of my great enlightenment will *reduce strife* between Christians and Muslims of the world. The implied reduction of costs in wars, conflict and so on between these two religious communities is also much bigger.

3. CONCLUSION: ONE RESULT OF MINE IS BIGGER THAN MAJOR SUCCESSES OF BILL GATES

The conclusion here is that this one result of mine is already much bigger than the major successes of Bill Gates. I am a Great Immortal Genius and he is a Puny Amoeba, so this is not surprising.
