

THERE ARE MORE TYPICAL WHITE MEN THAN TYPICAL CHINESE OR INDIAN MEN

ZULFIKAR MOINUDDIN AHMED

This is a simple issue of statistics. Total white people in the world is 0.78 billion; there are 1.21 billion Indian people and 1.3 billion Han Chinese. Just by ordinary genetic variation (virtually the same for all three groups) we see that there is more variation in Indians and Chinese than White people. The various ethnic jokes about how Indians are etc. are just rubbish. People are quite varied in personality and character where genetic determination is strong, ergo. there is definitely more personality and character variation in both Indians and Chinese than white people just because both have higher population.
