

**I AM A GREATER SCIENTIFIC GENIUS THAN ISAAC  
NEWTON, ERWIN SCHROEDINGER, ALBERT EINSTEIN,  
GEORGES LEMAITRE BECAUSE FOUR-SPHERE THEORY IS  
RIGHT**

ZULFIKAR MOINUDDIN AHMED

I am indeed a greater Scientific Genius than Erwin Schroedinger, Albert Einstein, Georges Lemaitre, Isaac Newton. That's because my Four-Sphere Theory is more right. There are other aspects to their illustriousness, their style, their national following, etc. I don't know about that. But in Scientific Genius I am greater because I am right. I am extremely respectful of Nature. Four-Sphere Theory is actually better than what Einstein and Weyl were hoping for in a unified field theory. It's close to absolute truth in macroscopic physics. But it is not the end but just the beginning. You see, our aims grow more ambitious. Theory of Everything was a grand ambition of early twentieth century; Four-Sphere Theory is more than that. It is a coherent mathematical physics with far more power than anything produced by Schroedinger, Einstein, Lemaitre, and Newton. But it is not even a small part of the mysteries of Nature. It's just a small step towards deeper understanding. I don't care about illustrious this and that. I care about Human Understanding of Nature. Arrogance is when we literally think we have Nature all sussed out. Such a thing is beyond my imagination. Nature is vast and we do not even have language to describe Nature. We pick and choose a few simple things and try to understand those things. Nature is frighteningly deep and complex. It's just beyond understanding. We are Nature's children. We have our limitations and our purpose. Nature's wild and complex mysteries are not exactly meant to be understood by us, stuck in a single planet, unable to find peace among ourselves. Anyway, it's good to keep striving for deeper understanding. Nature is so amazing that this is never ending.

Ah, there are some goals in all of this. We could have higher levels of life satisfaction by all this across the globe. There is Beauty too. And Love. We have a long way to go. But I like the Human Race. We'll get somewhere good. We're an Angelic Race. Angelic Races do fine in the end.
