

# **ZULF OUTLAWS 'RACIAL CHARACTER' BY RECONSIDERATION OF MORAL VALUES OF STEALING BY ETHNICITY**

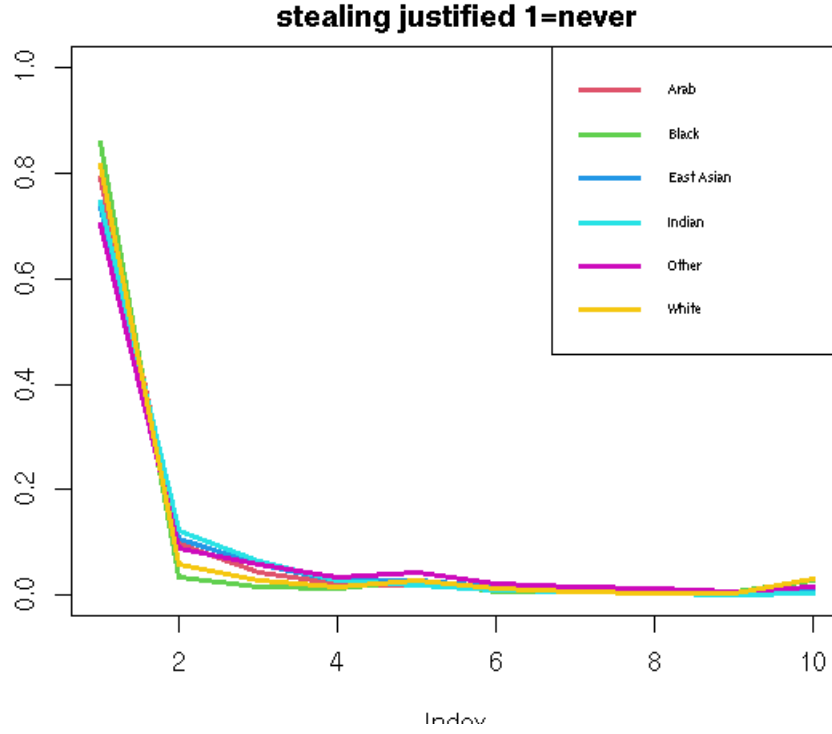

ZULFIKAR MOINUDDIN AHMED

## **1. 'RACIAL CHARACTER' IS MEANINGLESS**

For some people, 'Racial Character' just rolls off the tongue. It's a nice phrase, quite catchy. I have a nicer and catchier phrase for my dear readers: 'Human Nature Morals', and this is, I propose, the fundamental of 'Racial Character' of the only Race that has any legitimacy on Earth, the Human Race.

It is not new for Human Race to find a nice phrase and believe in its importance. In the past century there was Phlostigen. But just as 'Pink Flying Elephants' is a nice phrase that does not denote anything that is substantial, and just as Zulf is rather melancholic some days about how the Mermaids sing each to each but not to me as I stare at the horizon in the sea shore, 'Racial Character' is nonexistent. And I will return to the Moral Values of Stealing to bring home to my dear readers this point.

## 2. REPETITION OF MY NOTE FROM MAY 14 2021

## 3. MASS CONCENTRATED IN 1-6

	mass6
Arab	0.98
Black	0.95
East Asian	0.97
Indian	0.99
Other	0.95
White	0.95

## 4. EXPONENTIAL FITS

	eth	lambda	rsq
1	Arab	0.58	0.87
2	Black	0.32	0.40
3	East Asian	0.51	0.87
4	Indian	0.64	0.91
5	Other	0.38	0.76
6	White	0.36	0.52

Here  $\sigma(\lambda) = 0.13$  is the variation due to ethnicity in the exponential decay with mean

$$\mu(\lambda) = 0.47$$

The variation is quite negligibly small, as we can see from the total mass concentration of people in 1-6.

## 5. STRENGTHS OF INFERENCE FROM SAMPLE SIZES

Our inferences are based on samples  $N \geq 1100$  for all ethnicity classes. These are more than enough to overcome various small sample biases.

	N
Arab	1144
Black	2084
East Asian	8964
Indian	2560
Other	27783
White	6820

## 6. GRAND CONCLUSION

The burden lies on those who have ethnic theories of morality to explain the uniformity in human race convictions about stealing, say, across the globe. Our conclusions about irrelevance of morality in human race comes from extremely strong regularities in the distributions of all ethnicities. The effect of ethnicity is rather small on the force here of Human Nature, and I would not want to take on any position on ethnic differences on morality after examining the data. The data are strong and overwhelming, and ethnic theories of morality would be attempting to find something significant in noise. Theories of ethnic differences in morality were political propaganda from Europe in the seventeenth to nineteenth century that never had any scientific merit, and we can dismiss them as not just pseudo-scientific but totally wrong and misguided today with high quality data. Ethnic theories of morality belong with all other junk fantasies of primitive ages as a fascinating irrational phenomenon and historical curiosity now.

This conclusion is not just from this note but a larger oeuvre of my work on these topics. I am able to offer the Markov Moral Model which explains around 91% of the variability of morality of the Human Race, leaving around 9% to ethnicity and other effects.

Now 9% is scientifically not trivial, but we live on the threshold of an age which had theorised incessantly not just in Europe but in Asia about all manner of creative fantasies about superior morality of one tribe or another. So I am not enthusiastic about entering this labyrinth of error and confusion at the moment. Arthur de Gobineau was so enthusiastic about this erroneous path that he wrote a thick tome claiming 'race' will explain everything. We have better truth; human race, who I am rather fond of, is a noble race indeed, and has a bright future without all these primitive superstitions about tribal supremacy and other drivel.

## 7. NEW CONCLUSION

Every ethnicity has their good cats and their bad cats, their saints and their sinners. The distributions are quite close but do have precise variation of around 9%. This 9% is not just biased towards more good cats and fewer bad cats. It's a variation that is complex. In this situation, it is clearly absurd to claim that one ethnicity is superior morally to another ethnicity because the measured data does not support such a position. Indeed, these confused and misguided beliefs, far from the truth that had existed for millenia that I discovered, the universality of moral values in World Values Survey, leads to rejection of these particular schemes for organising the world in our minds. These ways of thinking are primitive and misguided, and my dear readers would do themselves and their friends and family a great favour by challenging and eliminating these wrongheaded ways of thinking.
