

HOW MY GENIUS IN PHYSICS DIFFERS FROM THAT OF RICHARD FEYNMAN

ZULFIKAR MOINUDDIN AHMED

Richard Feynman was for me an idol of sorts when I was in high school, and I still have with me the *Feynman Lectures In Physics*. I was moved by his anecdotes. His talents were very different from mine in physics. He knew all manner of precise things about properties of particular chemicals and enjoyed to think of things to do with them. My talents are much more philosophical and my historical breadth and humanistic training is better than his. I am also much more *religious* than he was, and for me *moral concerns* and concerns about Virtue and Romantic Love are more important. I am however not in academia and accosted by strongly racial politics and criminal powers of Bill Gates, which he was spared. But my Four-Sphere Theory is far deeper truth of Nature than Feynman's achievements. I do not have false pride here. Four-Sphere theory is infinitely superior as Science than Quantum Electrodynamics. That's simply fact.
