

# **ZULF PROPOSES A \$100 BN PLAY FOR BANK OF NEW YORK MELLON TO COUNTER 1000 NODE TECH MONOPOLY BY BILL GATES**

ZULFIKAR MOINUDDIN AHMED

Bill Gates took some of my ideas for 1000-2000 node server computing with Mesos and is plotting to monopolise this space. I recommend \$100 billion play for Bank of New York Mellon as follows.

Put \$50 billion in the technology sector for 50 new companies of size 1000 each. Ensure great job security to all employees and great salaries. Make condition of employment cooperation with the rest and non-compete agreements. Produce physical conferences for leaders to meet to discuss future of technology. Hire architects to produce top of the line work environment including furniture, lighting, the works. Initial focus is joint work on large 1000+ server distributed computing technology. Strong anti-racial discrimination, and then leave them alone.

50 new 1000 person companies with talent from around the world will transform the whole world's technology if their working conditions and job security and work-life balance is good and they are cooperating.

US Defense can be asked to ensure they are not controlled by Bill Gates by high power forbids. They can smoothen out the Mesos type technology to cooperative joint products that can transform the world for the better.

Wait for Bill Gates to hike the price of services, then rip him apart with offerings that are higher quality and with much better engineering.

That will be a rap for our robber baron.

Never worry about nickel and diming good people doing good work. It's always bad Finance.

## **1. NOTE TO RON LIESCHING OR WHOEVER DOES THIS**

Never give specific instructions to tech talent. Preside over some of the gatherings and keep telling them they are the world's leaders in technology, that time has come for them to make their mommies and daddies proud, their country proud, their girlfriends and boyfriends proud, and time has finally arrived for them to lead the world to a better place etc. All very encouraging. Never make them feel that they will all be fired if anyone is disappointed. Make them feel comfortable and uplifted and then go. Let them sort things out for future of technology. Don't pressure them relax for several years and ensure that they do meet for discussions and panels etc. Do not be afraid of doing the exact same speech over and over again about mommy and daddy and everything. You're senior enough to get away with it. Do it.
