

JEFF BEZOS IS A CODER BILL GATES WASN'T REALLY

ZULFIKAR MOINUDDIN AHMED

Bill Gates is all about power and money, not coding. He's using hard meta in people's soft meta, like sticking metal wires in your veins, disgustingly evil son of a bitch without conscience or even a slight sense of humanity.

Jeff Bezos is different. He's a coder's coder. Everything about Amazon is about parametrising every fucking thing under the sun into JSON files and then using them to automatically run all sorts of hardware, not to mention optimising every single thing. Those obsessions are coder's obsessions. If Jeff ran the world, everything under the sun would be parametrised in gigantic highly complex JSON files and algorithms would run all sorts of things.

I am fine with that. That's not exactly my way, but it's fine. Now I do want JSON-isation of documents people actually use. That's something not done yet and I hate all the proprietary non-JSON data. Other formats will cost us a huge fortune and headaches.
