

ON THE ART OF INSULTING PEOPLE EFFECTIVELY: CASE FOR 'INSIGNIFICANT AMOEBA'

ZULFIKAR MOINUDDIN AHMED

First of all *never ever ever* call anyone an insect. This will backfire and you will be in trouble because of the Nazis and others who were hateful. Calling someone insect makes you look worse than your target and you're then a hater to the public. Never ever use 'insect'.

Instead use 'insignificant amoeba'. This is much more beautiful. No one associates 'amoeba' with hateful speech. And it is phonetically closer to 'amo' and 'amie' so in Romance languages the stem 'am' truly is marvelous in producing the psychological comfort of friendliness and love and friendship.

At the same time amoeba is harmless in a way. It is not a virus or a bacterium. It's an amoeba. But it is insignificant and puny even compared to the insect. So you *avoid being a hateful man* and get double puny on the other guy and seem like a friendly type still.

Magnificent. Use 'insignificant amoeba' more and abandon some of the other things like insect, virus, snake, etc. unless you know exactly what you are doing. I am using "Insignificant Amoeba" right now against Bill Gates and it is quite good. I like the results, and I recommend it.
