

## LETTER TO STANFORD REGARDING PING TENURE LETTER STRATEGY AGAINST BILL GATES POWER

ZULFIKAR MOINUDDIN AHMED

Dear Stanford,

I like this ping 'tenure letter' strategy against the vile things that Bill Gates had been doing with all sorts of racial powers he has used against me. He is one of the most disgusting racist butchers that will put all the Nazi Auschwitz butchers to shame. Such a vile disgusting racial supremacist I have never encountered and look forward to the time when white people lynch the right man for a change, i.e. Bill Gates.

Anyway, I am not an obsessive Starcraft II player but I decided to play just quickly one game against AI. I am better than "Harder" level, but I played in it and won and got this nice message.

Then I decided to share the replay with the world for a game from January 3 2021 [1].

Like all people who play Starcraft II instead of doing serious things with their lives, I have an excuse. The excuse is that Starcraft II gives a direct measure of *skill increase over time* that is not based on any intellectual work at all. In other words, the more you play Starcraft II, the more you will get better at it, and this is the basis of *habituation for Virtues* of Aristotle, something that is simply not understood at all. What happens during habituation cannot be explained simply

by intellectual or physical *natural ability*. Abilities change and your mind and hand-eye coordination is not different by any nature. So there is mystery in Starcraft II. Of course the actual activity in Starcraft II is entertainment but this observation is serious for psychology and study of human nature.

I use the same philosophy in Stanford Ph.D. Mathematics Quals problems. Practice improves in uncanny ways one's abilities without any overt physiological changes.
