

ZULF’S ADULT ANALYSIS OF BILL GATES’ SHIT-PISS-COCKROACH SERUM THEORY OF NON-WHITE BLOOD

ZULFIKAR MOINUDDIN AHMED

Bill Gates proposed the shit-piss-cockroach serum theory of non-white blood. I am Zulf, an immortal scientific genius, and so now that I look at this theory I will propose a pathway to make sense of this.

1. BILL GATES THEORY CANNOT BE TRUE AS IS

We know that human blood is a phenotype phenomena expressing the human genome. We know that human red blood is mostly red blood cells that carry oxygen throughout the body. We know also that shit, piss, and cockroach serum are poisonous for human blood and so we can reject Bill Gates Shit-Piss-Cockroach Serum theory of non-white blood globally. In other words, with some thought we can use the reasoning Shit-Piss-Cockroach Serum are *poisonous* to all human blood and therefore are part *neither of* white *nor* of non-white blood.

Fine, so as it stands we have rejected his theory.

We can confirm this easily by electron microscope photographs of red blood cells and note that they look nothing like shit-piss-cockroach serum electron microscope photographs. We then say while Bill Gates Shit-Piss-Cockroach Serum theory for Non-White Blood is pioneering and imaginative, and bold, it is false.

2. MODIFIED BILL GATES THEORY: FRAGRANT SUBSTANCE VERSUS FETID STINKY SUBSTANCE

Now let us modify his theory to a more general theory, to see if he has any substance at all. Let’s call this The Fragrant Versus Fetid Stinky *Red Blood* Theory. He did not propose this directly, but I am giving him the benefit of the doubt, because he’s not experienced in science and may not know how to modify theories to come a bit closer to truth.

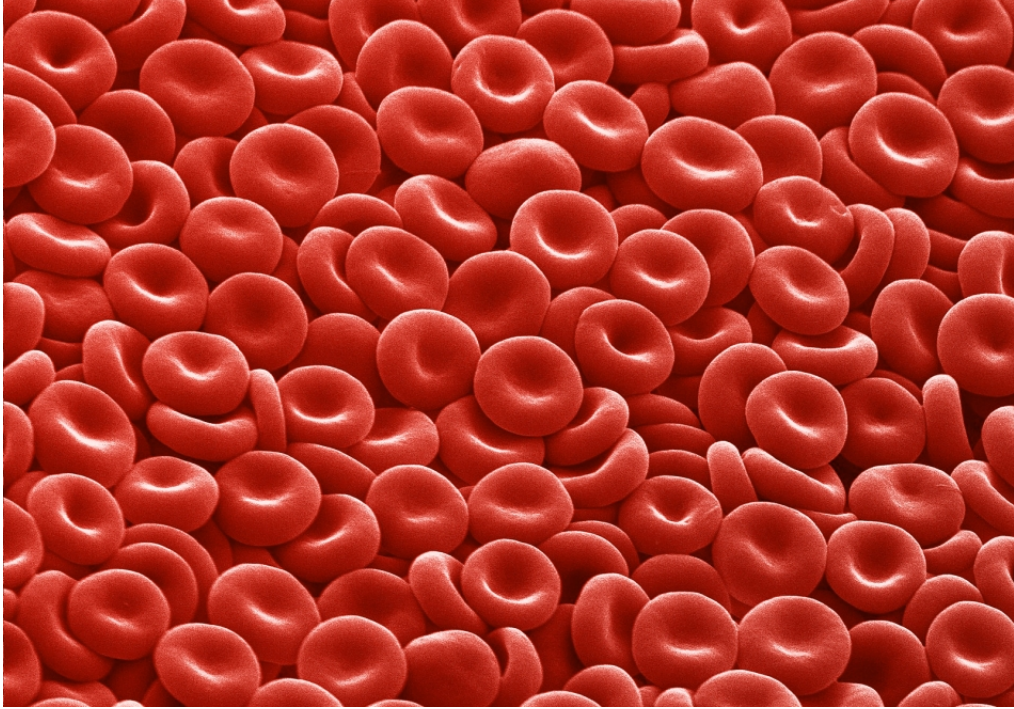

This theory is mine, as a modification of Bill Gates’ original Piss-Shit-Cockroach Serum Theory. This theory is based on finding from the arguments that being both poisonous to human blood, the substance of piss, shit, and cockroach serum, and having totally different physical structure in electron microscope the theory does not stand.

The modified theory is subtler. It will posit that although whites and non-whites both do have red blood cells, the white red blood cells are Fragrant and non-white red blood cells are Fetid and Stinky.

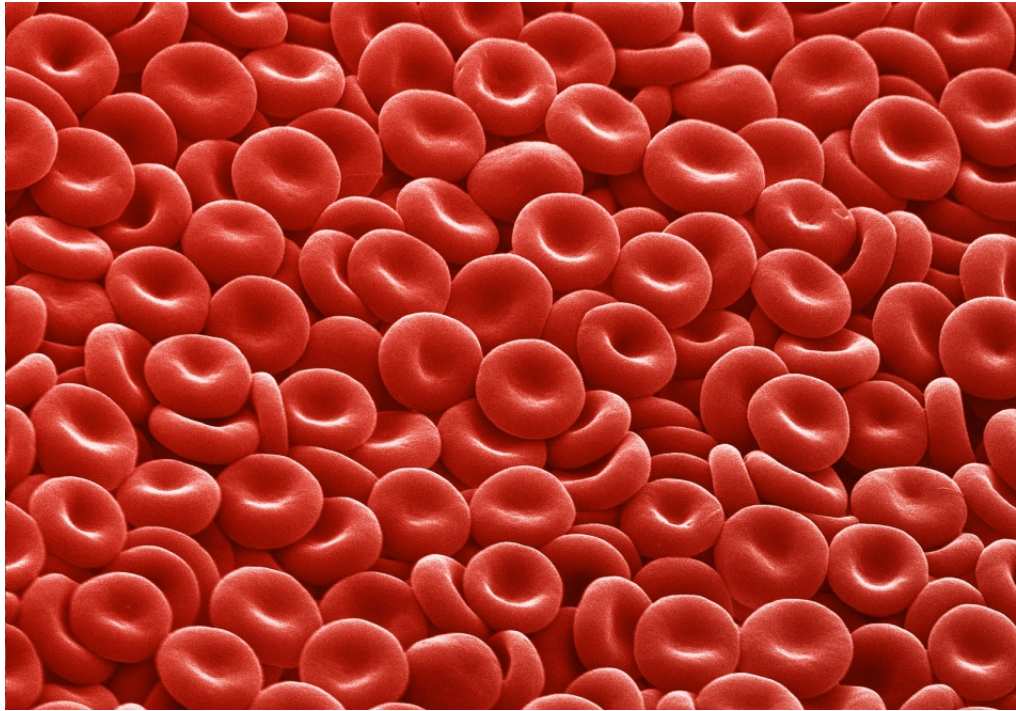

What have we done here? We avoided the first problem of his theory, which is visual geometry. We use the knowledge that blood will be overwhelmingly red blood cells for both non-whites and whites. But we are still keeping Bill Gates’

hope that there will be a difference and that since whites are superior, the white people's red blood cells will be *Fragrant* while since non-whites are inferior their red blood cells will be *Fetid and Stinky*.

This is a much better theory than the original theory. Now we cannot simply reject it very easily. We will see the red blood cells of whites and see something like this.

And we will say okay. And then we will look at non-white blood and we will see something like this.

We now have a subtle issue. We cannot detect the difference posited in the modified theory geometrically.

So this must be a very deep and esoteric theory, and we must find some way of determining how exactly we can test the modified theory.

Then we say, ah, so perhaps the Fragrance and Fetid Stinky qualities are within the cells. Something like, white people's blood will carry fragrant and aromatic oxygen, while non-white people's blood will carry oxygen but it will be fetid and stinky.

That's very interesting, a profound sort of idea, and we have to roll up our sleeves to understand this deep and profound idea.

3. HARVARD BIOLOGY CAN YOU USE \$120 BILLION?

Why don't you ask for \$120 billion from Bill Gates for these profound questions of racial superiority research from Bill Gates? Give me 10% and then I don't care what your results are. Clearly these are very important to the man.
