PROMOTES MY BREAKTHROUGH IDEA ABOUT UNIVERSAL
HUMAN EMOTIONS**

ZULFIKAR MOINUDDIN AHMED
ZULFIKAR.AHMED@GMAIL.COM

In this note I will be strengthening an extremely important insight I had produced yesterday, one that will transform the future of the entire human race eventually.

The insight is not a proven theory but a new hypothesis that I am confident will be proven and reconfirmed and established with measurements and experiments. I want my dear reader to understand that what I will tell you is not proven but a hypothesis. I want Harvard Psychology and Stanford Psychology to prepare to do studies to test and prove my theory.

I do apologise that the theory is not going to be erudite for the moment because I have only been studying human psychology and emotions for a few years and my educational credentials are Mathematics from Princeton University (magna cum laude 1995) and Columbia University 1996-2000 (incomplete doctorate with publication with Daniel Stroock in 2000 in Journal of Differential Geometry).

What I am going to tell you is my original insight. It was not supervised by any expert at all and I claim full and total credit for my insight and in the future, I will dispute any priority claim about my insight. I am extremely displeased with the habits of some people, like *Bill Gates* of destroying people and taking their insights and work and taking credit for them.

1. HUMAN EMOTION HABITUATION HYPOTHESIS

The great insight I would like to call *Human Emotion Habituation Hypothesis*. I will review the literature for a more scholarly discussion of the issues later. In this note I will explain it in simple ordinary language so that people who are not experts in Affective Science and Psychology of Emotions can appreciate and grasp my *Human Emotion Habituation Hypothesis*.

I will hold that emotions can be divided into basic emotions and nonbasic emotions. I will follow exactly the division of Jaak Panksepp and David Watts. Here I do not have anything new to add. I will hold that Panksepp-Watts division of emotions is right.

Then what is new is the following. I will posit that *basic emotions* are universal across all human beings and their measurements across human beings will be regular. This is not original to myself.

And now I will add the nontrivial hypothesis that is totally original to me and whose correctness will be transformative for the entire human race. It is that *for*

nonbasic emotions all variation across human race depends only on one factor and one factor alone, and that is *habituation*.

In other words, my hypothesis is that all possible human emotions across the entire human race has the following structure.

$$x = x_b + x_h$$

where x_b is basic and x_h is the effect of only habituation.

I will claim that this division will fully characterise all actual human emotion of all people everywhere on Earth, for all past human beings, and all future human beings who will ever be born on Earth.

2. INFINITELY BIGGER THAN ANYTHING BILL GATES HAS EVER DONE

The hypothesis I present above is much bigger than anything the wretched miserable worthless little shit Bill Gates will have ever done in his entire life or in twenty thousand lives. He's inferior to me. I am infinitely superior to him.
