

# A NEW CONJECTURE ON SPEED OF HUMAN MORAL EVOLUTION

ZULFIKAR MOINUDDIN AHMED

## 1. SMALL VARIATION DUE TO ETHNICITY IN MORAL VALUES

I discovered just today the ethnicity effects on Moral Values.

	eth	explained
1	Arab	4.82
2	Black	3.75
3	East Asian	4.85
4	Indian	7.73
5	Other	1.89
6	White	6.07

## 2. EVOLUTIONARY HYPOTHESIS

We hypothesize that these deviations arose from 75,000 years of evolutionary changes.

This gives us a rough gauge of speed of human moral evolution.

## 3. ZULF'S SPEED OF MORAL EVOLUTION CONJECTURE

I will claim that the speed of moral evolution of human race is roughly  $10^{-4}$  percent per year. This is roughly  $8/75000$ .

Scientific consensus today is that non-Africans spread from East Africa 75k BP. Our hypothesis is that the divergences by ethnicity is due to evolutionary changes at a scale of about  $r = 1e - 4$  percent points per year.

The estimate is not meant to be sharp but it does require some more work to establish.
