

ZULF'S HOLISTIC PHILOSOPHY OF THE UNIVERSE AND MATHEMATICS

ZULFIKAR MOINUDDIN AHMED

I began my sojourn into four-sphere theory and even before about a coherent mathematical understanding of objective nature. Four-Sphere Theory succeeded in 2018 and I turned some years before to psychology and eventually to positive psychology, universal human nature, vindication of virtue-eudaimonia theory of Aristotle, spectrum of virtues for life satisfaction.

I like to have a single unified view of Man and Nature. I do not see mathematics as a separate field but as methods to understand the holistic truth of Man and Nature. I think only some theorems matter, and those are the theorems that tell us about the Whole, give us deeper insight. I don't care generally about mathematical issues otherwise. They don't matter to me at all.

So I am strongly opinionated, and the basis is my Holistic view, and I believe this is a decision on my part, that I don't really believe that anything that does not tell us more important things about the Whole has a lot of value.

1. MY VISION FOR HUMAN RACE

I want all people everywhere, rich or poor have access to high quality certain and canonical knowledge that is easy to understand and highly well-tested, and uniform, and curated for high value. I have discovered, for example that Eastern and Western mean virtues are statistically identical, so I believe strongly in a single human race.

What I am looking for eventually is canonically best knowledge for all young people so it is simple and easy to absorb and valuable.

In the long run, as eight billion have solid certain high quality knowledge, the entire human race will be more *elevated in civilisation* and there will be a virtuous circle for the entire human race that will cascade us to higher levels of existence.
